

## THE PERFTRACK GUI

### Issues with the Icons:

#### 1.New Query:

In the new query we have to choose resource names and attributes in the given list view and then add them to the selection parameters and press GetData to retrieve the results.

We are able to

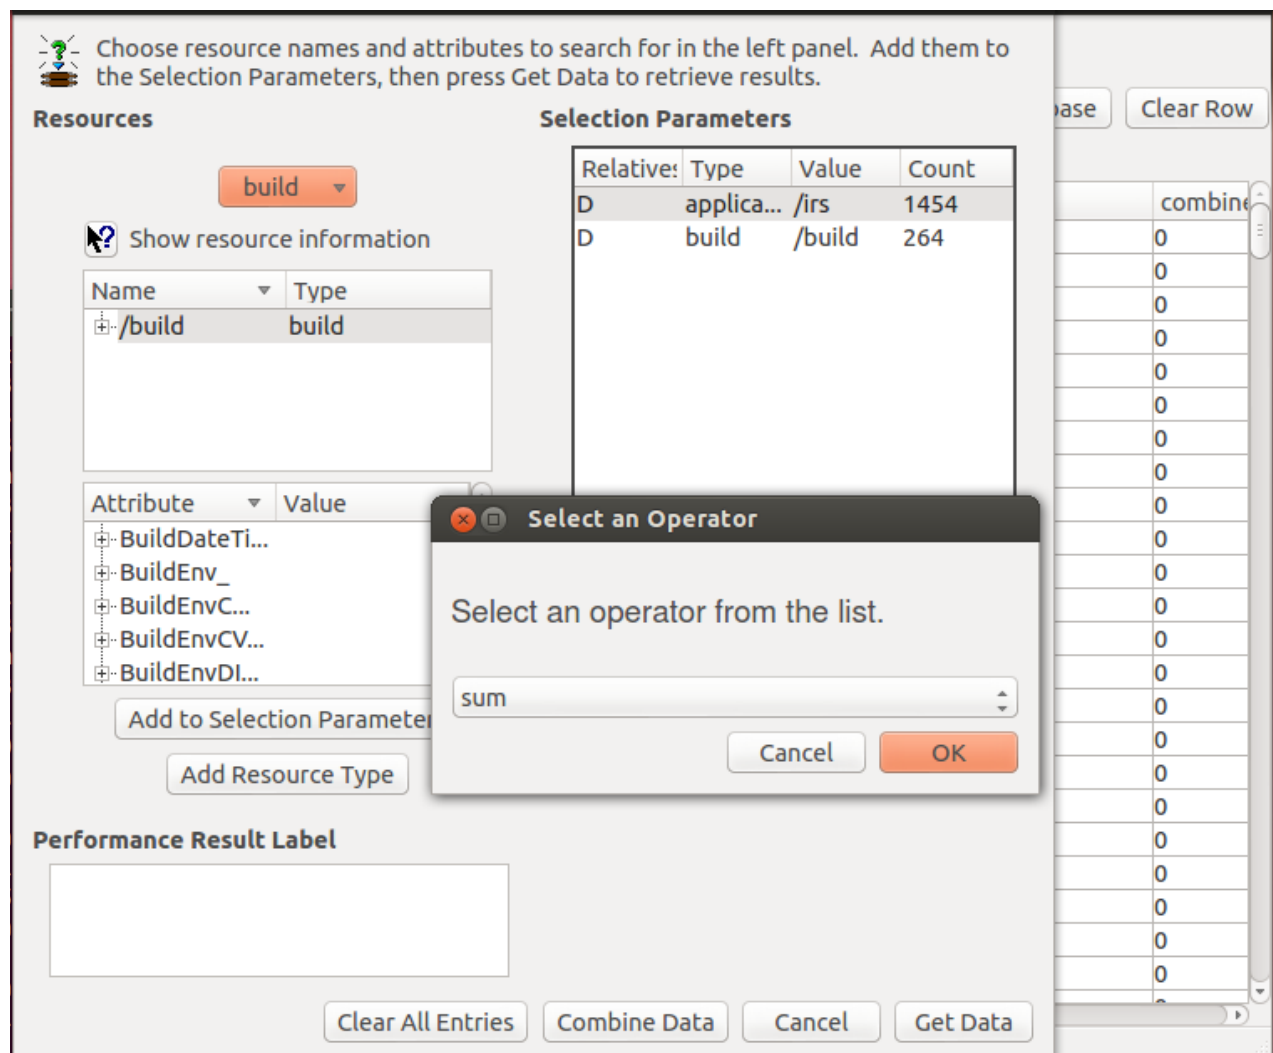

add to the selection parameters,

clear all entries

"clear highlighted parameters" button is also working fine but

combine data button is not working for some reason which we are trying to solve that issue

Below is the screenshot of the New Query

## 2. Open data file:

We had an issue in the open data file too.

The open data file is not opening any files which we selected.

### 3.Add display parameters:

When selecting the Resources, their attributes are not populated and even after selecting the Resources without attributes and trying to Get data, we cannot view any data of the selected Resource. We are trying to fix this issue.

Add Data Columns

Add data columns to table by highlighting resources and attributes, then pressing Add... buttons to select them. Press Get Data to retrieve results.

Available Display Columns

Resources

build/module/function

environment/module/function

execution/process

execution/process/thread

operatingSystem

Add Highlighted Resources

Attributes

Add Highlighted Attributes

Selected Display Columns

Selected Resources

Retrieved	Resource
<input checked="" type="checkbox"/>	operatingSystem

Selected Attributes

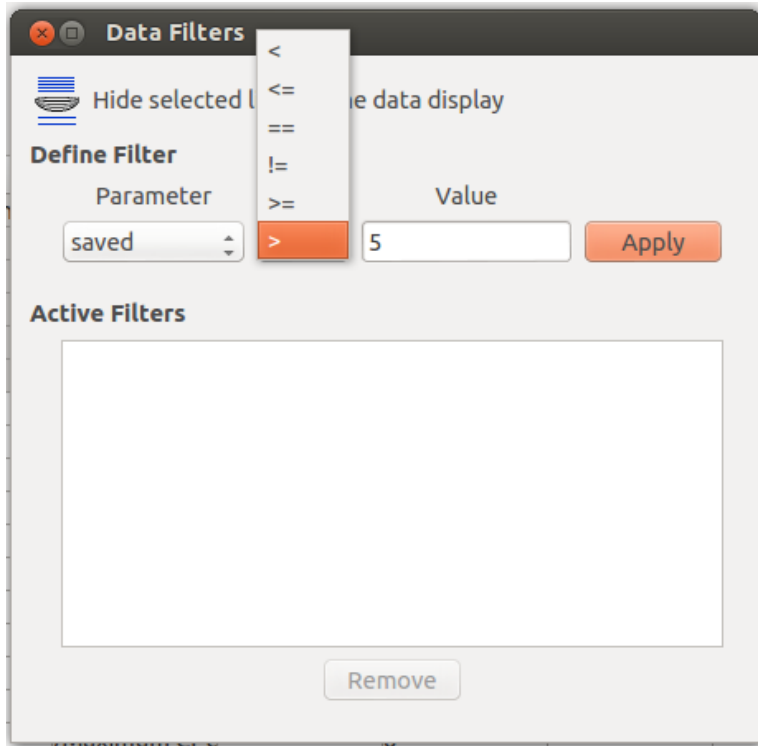

Retrieved	Attribute
-----------	-----------

Remove Highlighted Columns

Get Data

#### 4.Filter result:

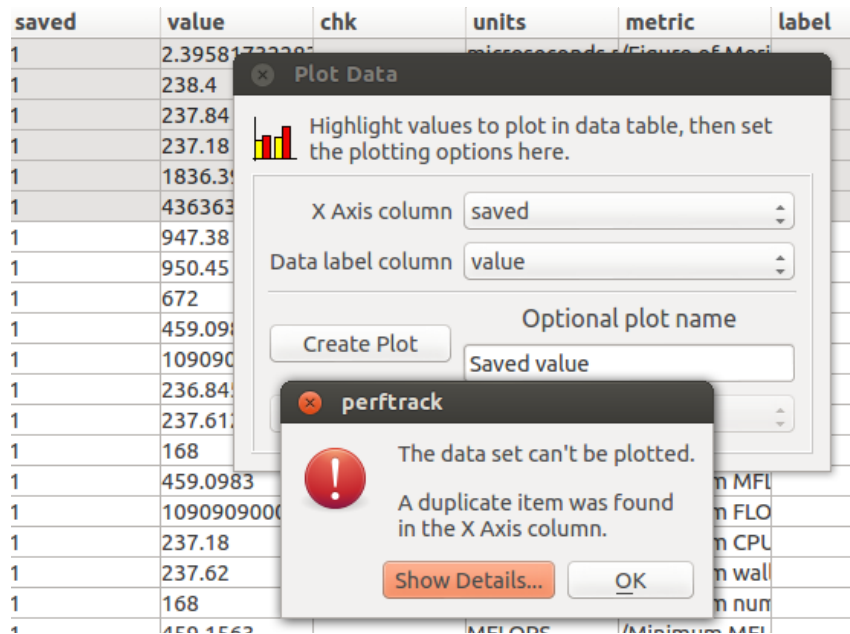

Presently we can define filters on number fields using relations. For Performance improvement we are trying to add filters on character fields.

#### 5.Plot data:

Working fine but it is showing error when we select the field with redundant

values as shown figure 1.

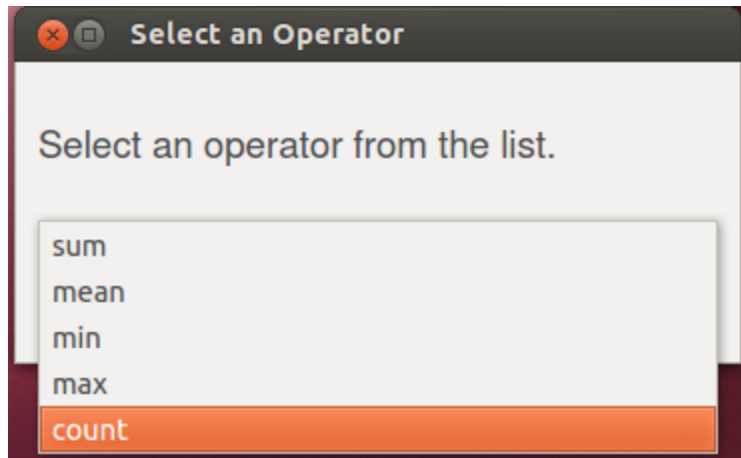

(Figure 1)

## 6.Combine performance result:

When we select Combine performance result icon then getting popup Select an operator window (figure a) and able to select an operator (figure b) but Ok and Cancel buttons are not working on pop up window.

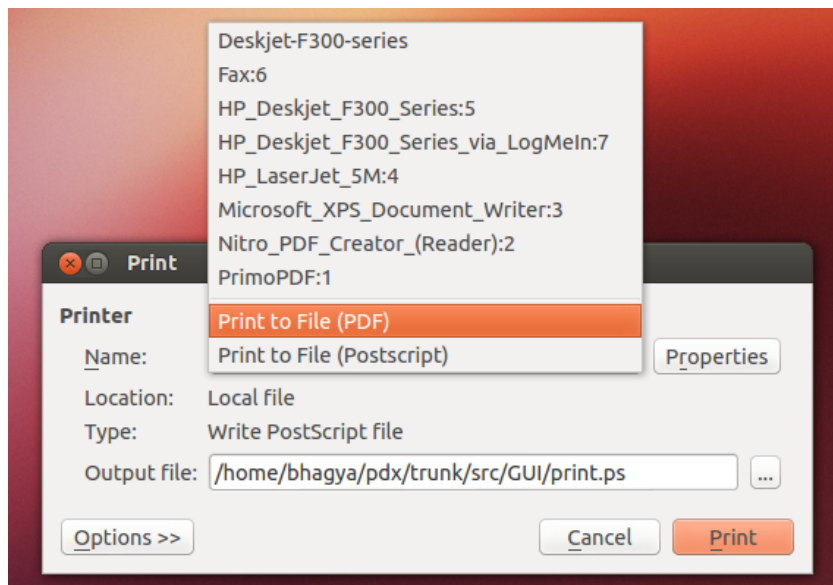

(Figure a)

(Figure b)

### 7. Print or Data as text:

Trying to get PDF format using printer options ( figure I), but we got data as shown in figure II.

( Figure I)

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99	100
